

Attributions

All external/stock assets — art, audio, fonts, shaders, code snippets — are logged here per §8 of the [Project Bible](#). Every entry records: **asset name**, **author/creator**, **source URL**, and the **real, verified license** (with any required attribution wording copied in verbatim).

Samurai 2D Pixel Art (v1.2) — player character sprites

- **Author/creator:** xzany
- **Source:** <https://xzany.itch.io/samurai-2d-pixel-art>
- **Used for:** the Player character animations (idle, run, attack, hurt). Sheets copied to `assets/characters/samurai/` (idle/run/attack/hurt.png), 96×96 frames, horizontal strips.
- **License:** Free for use in any game project, personal or commercial. Credit not required (but appreciated). May be modified. Must be part of a project — not resold or redistributed as a standalone game asset. Not to be turned into an NFT. Full text preserved at `assets/characters/samurai/LICENSE.txt`. Verbatim:

You can use this asset in any game project, personal or commercial. DO NOT resell or redistribute AS A GAME ASSET, it has to be part of a project. Credit is not required but it is appreciated. Modify to suit your needs. You are NOT allowed to turn any of my assets to an NFT.

Tiny Pixel Japan Male Character Pack — NPC sprites

- **Author/creator:** Lynia Design (lyniadesign)
- **Source:** <https://lyniadesign.itch.io/tiny-pixel-japan-male-character-pack>
- **Used for:** village NPC characters. Sheets copied to `assets/characters/npc/` (ronin/samurai/lord/villager.png; 29×28 frames, two colour variants each, side-view idle). The **Thief** uses the Ronin, the **Child** uses the young Villager (scaled down).
- **Modification:** `assets/characters/npc/widow.png` is a recolour of the pack's old-villager variant (olive robe → indigo, hair lightened) to stand in for the **Widow**, since the pack has no female sprite. Derived from this pack; same license applies.
- **License:** Confirmed by the project owner: free for commercial use. (itch.io pack; no license file shipped in the folder — usage rights confirmed directly by the owner.)

Feudal-Japan Tileset & Prop Pack (war-torn / snow / green sets) — SUPERSEDED, no longer shipped

- **Author/creator:** not recorded — the pack name and author were never supplied by the project owner, and the pack was retired before that gap was closed (see status below).
- **Source:** not recorded (private hand-off; no itch.io/marketplace URL was provided).
- **Status: Superseded during the v2 art pass and removed from active use.** This was the first environment-art pass: its six sheets were extracted into per-biome folders under `assets/environment/` (`warvillage/` , and the original ground/prop seeds of `bamboo/` and `snow/`). Judged too low-quality, it was replaced everywhere by the ForgottenMemories pack below. The extracted sheets and their old `*_tileset.tres` still sit on disk but are **not referenced by any scene or TileSet** — no pixel from this pack appears in the current build.
- **Used for (historical):** the first tileset pass of the walkable chapters — war-torn village buildings/torii/wells/fences, a green bamboo set, and a snow set (drifts, rocks, snow torii, gravestones, banners). All since replaced.
- **License:** Confirmed verbally by the project owner as licensed for use in this project. Because the pack no longer ships, no attribution obligation carries into the released game; the retained provenance here is historical. If the extracted folders are ever revived, the exact terms and author/source must be captured first (Bible §8).

ForgottenMemories (fm32x32) — terrain + nature for every walkable chapter (v2 art pass)

- **Author/creator:** immunitys
- **Source:** <https://immunitys.itch.io/fm32x32>
- **Used for:** the redesigned terrain of all four walkable chapters, all driven by the same 32px neighbour-selected autotiler (a real grass↔path road with tufted transitions):
 - **Village** — grass/dirt floor + trees/bushes/stumps/rocks + rock-rimmed pits (ruined foundations). Painter `scripts/world/village_ground.gd` .
 - **Bamboo Forest** — the same grass/dirt floor (layer-modulated cooler/greener) with FM willows/pines/bushes/rocks for depth. Painter `scripts/world/bamboo_ground.gd` .
 - **Snow Mountain & Final Approach** — a **winter recolour** of the FM tileset (green→snow, dirt→packed trodden path), so its real transition tiles paint snow↔trail. Painters `scripts/world/snow_ground.gd` , `final_ground.gd` . Sheets copied to `assets/environment/fm/` (`tileset.png` , `props.png` , `trees.png`); cut-out props in `fm/props/` ; TileSet `fm/fm_tileset.tres` .
- **Modification:** `assets/environment/snow/snow_tileset.png` is a hue-classified luminance recolour of `fm/tileset.png` (shading structure preserved, no tiles repainted). Derived work; same license.
- **License:** "Name your own price" itch.io pack (free download available). Free for personal and commercial use; may be edited; credit not required (but appreciated); may NOT be repackaged, redistributed, or resold. Verbatim, from the pack page:

Assets can be edited and used for personal and commercial use. Credit is not necessary but it is highly appreciated. You may not repackage, redistribute or resell the assets, modified or not.

Our use complies: the pack drives the shipped game and its derived snow recolour, and neither the originals nor the recolour are redistributed as a standalone asset.

Original generated props (this project) — bamboo / winter / grave art

- **Author/creator:** made for The Last Ronin (procedural pixel-art, PIL).
- **Used for:** the signature pieces the packs above don't cover, generated as clean 32-px-style pixel art and base-anchored like the pack props: bamboo culm clumps, a vermilion **torii**, stone lantern, jizō, stele, temple bell, kabuto, ferns/reeds ([assets/environment/bamboo/props/](#)); snow-laden pines, snow-capped rocks/spire, drifts, a cairn, a snow-dusted torii, a war banner, a snow-buried fallen warrior, and the final grave monument ([assets/environment/snow/props/](#)); plus the village gate & signpost ([fm/props/](#)).
- **License:** original work; no third-party rights.

Pixel Crawler — Free Pack (anokolisa, 16×16) — available, not yet used

- **Author/creator:** Anokolisa
- **Source:** <https://anokolisa.itch.io/free-pixel-art-asset-pack-topdown-tileset-rpg-16x16-sprites>
- **License (from bundled Terms.txt):** free to use in commercial/study/any projects; may be altered; credit appreciated but not required; may NOT be resold/redistributed as an asset.
- **Used for:** nothing yet (fantasy interior/dungeon/building kit; held for possible later use).

pixel_16_woods v2 (zedpxl, 16×16) — available, not used

- **Author/creator:** zedpxl
- **Source:** <https://zedpxl.itch.io/pixelart-forest-asset-pack>
- **Used for:** nothing — the Bamboo Forest was built from the FM pack + generated bamboo instead, to keep one consistent 32px look across chapters. Held for possible later use.
- **License:** free and paid versions available; both permit commercial and non-commercial use, and modification; may NOT be resold or redistributed (even if modified); may NOT be used for AI- or NFT-related purposes. Verbatim, from the pack page:

This asset pack (free and paid) can be used in commercial and non-commercial projects. You can modify it for your needs, but you cannot resell or redistribute it, even if modified. You cannot use this asset pack for AI or NFT related things.
